

PROTECT YOUR BRAIN FROM IMPACTS IN SPORT

HALOS® BRAIN PROTECTION

The brain is vulnerable to rotational forces, which are present in both concussions and sub-concussions. Rezon Halos® is the only sports headband proven to protect the brain, reducing rotational forces by up to 61% and reducing the risk of concussion by 74%.*

REPEATED IMPACTS CAN CAUSE SIGNIFICANT BRAIN DAMAGE

Despite heightened awareness of brain injury in sport, many parents, players, schools and clubs still don't know enough about the short and long-term consequences of head impacts and brain injury.

One of the biggest dangers comes from rotational forces that are present in every head impact. These forces cause the brain to rotate inside the skull, shearing brain cells, tearing blood vessels, and causing inflammation to the brain. Every head impact increases the risk of longer-term conditions like **Chronic Traumatic Encephalopathy (CTE)**, which can lead to athletes developing dementia from their twenties onwards.

**SUB-CONCUSSIONS ARE OVER 500 TIMES MORE
FREQUENT THAN CONCUSSIONS.**

Concussions (which many people know about) and sub-concussions (which many people don't know about) both involve rotational forces.

Sub-concussions are the greater danger because they are more frequent and, despite going unnoticed, they progressively impact memory and attention, suppress brain function and contribute to later-life mood and behaviour problems.

WHO IS AFFECTED? THE SIMPLE ANSWER IS EVERYONE

Concussion and sub-concussion can affect every player whatever their age, position, fitness or experience level. However, two groups have an even higher risk:

CHILDREN.

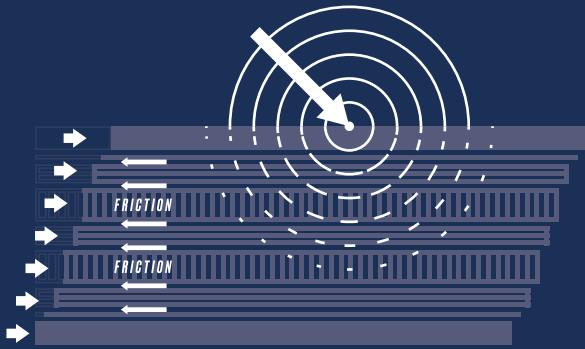

Between 8 and 12, children's brains are at peak development and there is a higher risk from head impacts.

WOMEN.

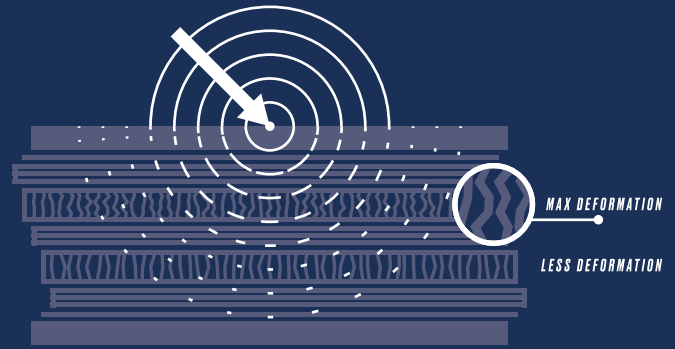

Due to longer recovery times and more pronounced post-concussive symptoms there is a higher risk for sportswomen.

REZON HALOS®

THE ONLY SPORTS HEADBAND PROVEN TO PROTECT THE BRAIN FROM CONCUSSIONS AND SUB-CONCUSSIONS.

On impact, Halos nine protective layers move to reduce impact energy via friction.

Specific layers also deform to further reduce impact energy.

MULTI AWARD-WINNING, BACKED BY EXPERTS, AND AT THE FOREFRONT OF BRAIN HEALTH.

- **Nine protective layers.** These slide over each other to reduce rotational forces.
- **Fit and forget.** Stays in place during play, even when heading and in the scrum.
- **Lightweight and waterproof.** You can play any sport without distraction.
- **Designed for comfort.** Breathable, hypoallergenic and sweat wicking.
- **Eco friendly.** 100% recyclable and UK-made to minimise carbon footprint throughout the supply chain.

BRAIN PROTECTION THAT YOU CAN **TRUST**

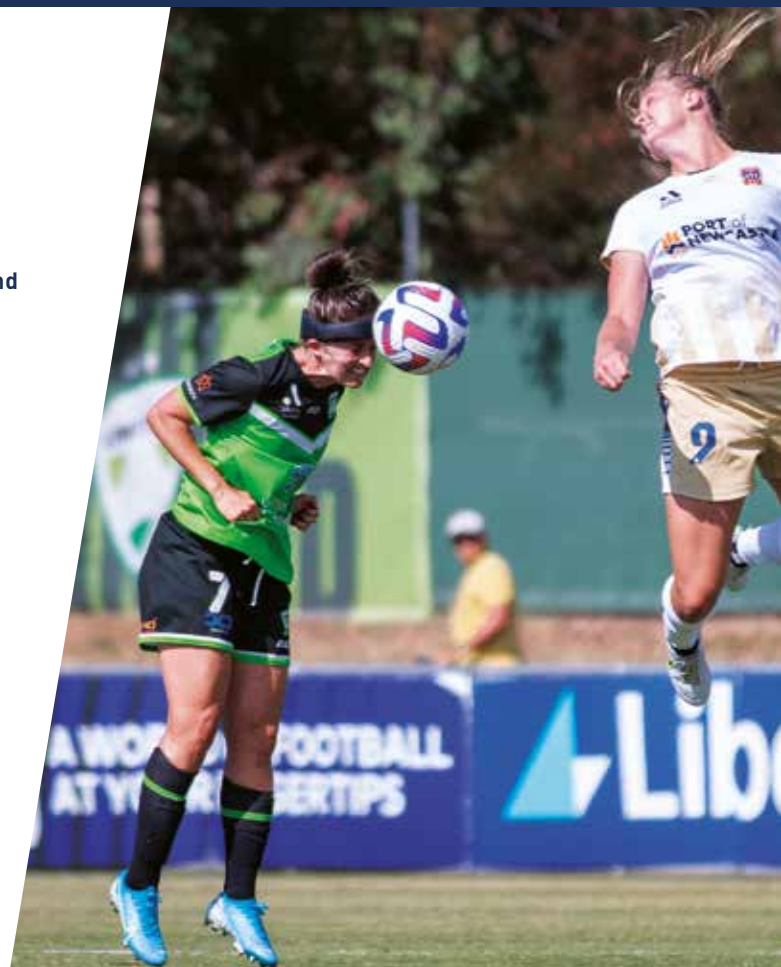

- The first and only CE Category II PPE-certified protective headband – meets the UK and EU legal standard.
- Reduces rotational forces in head-to-head impacts by up to 61%, and rotational forces in extreme head-to-ground impacts by 27% (Independent testing).
- Global safety testing lab Virginia Tech rates Halos® five stars, showing it reduces the risk of concussion by 74%.
- Registered as a medical device with the Food and Drug Administration (FDA) in the US.

PROTECT YOUR BRAIN *IN SPORT!*

Ground-breaking protection to reduce the risk of concussion and sub-concussions in sport. But don't just take our word for it:

"Having CTE and knowing lots of small-force sub-concussions caused it. I'm determined my boys protect their brain and wear Rezon Halos® to protect them!"

Jason Hobson, Ex-England Rugby Player

"COMFORTABLE AND UNRESTRICTIVE!"
